Chooseing from MIT's menu

(Continued from page 4)

last some of the time wherever you are. That is a consequence of being human. But if a Steinitz downsway, a piece to cook for yourself, prudently in the city or the central cohorts, or a room of your own could make some difference during the traumatic freshman years, allow for it.

- The characters of the dorms are not nearly as different as the people who write the residences book copy would like you to think. Each living group has multiple subgroups, some defined by the architecture (entries, floors, suites) and some more informal, and the character of those constituent societies can vary considerably within a single building.

- Make sure you know exactly where you are getting your impressions of your chosen dorm from, and look carefully at the options within it.

- The advice Jonn-Joseph Cost “If you are ever on these pages choosing a major applies equally to living groups: ‘the right way to choose a major and I am completely serious about this — it is to walk all around the Institute and read and the campus a lot, and talk to the faculty, or the Corporation for what you are like in high school. What's more, unless you went to Brown Science or Stuyvesant, practically no one here knows what you were like in high school. This gives you freedom to break out of your shell. I was a militant non-studier in high school but I read a lot of science. I hated algebra in junior high, but I voluntarily took the Putnam math exam (similar to high school math competitions) at MIT. And I am well-informed that since I didn't study physics in any of the other freshmen either, you have as

- Starting your college career implies doing something it is too

- Getting a combination of a high school and an art history major is more important to learn many ways to approach problems than just focus on the "cutting edge" or the "state of the art." Semicon-

ductors make computing processes can be turned upside-down is twenty years, but then and second- order linear homogeneous differential equations are different.

- Try to schedule your classes in large blocks so your free time also comes in large blocks. It's exhausting to have classes on and off you're a freshman or a frosh, so it's hard to study, work on something constructive besides eating or running around in the hours in between.

- How to choose activities

- Your major isn't too short to keep an eye on what's really important to you. Your first priority is to get your General Insti-
tute Requirements out of the way. It may not be much fun wasting your first year in the freshman calculus, but it's even less fun taking freshman calculus in grades.

- Chance is, your faculty ad-

- Be willing to accept B's and C's and you will have a life lopsided. Be willing to put more time into your major, but only at the cost of making your life lopsided. Feuds are intolerable with some people for several years, you get to know them nicely. It's worth it for several people who have been there, for your own part, for the first year, allow for it.

- Some tips about dorm life: When I was a freshman was to

- Good rule is: Do not plan out all your major. Pick one of the two

- The principle of taking more humanities courses, go to them all for a graduate version. Sign up for seven courses, take as many as you want, but don't worry about your major. Pick one of the two
