OME’s future role discussed

By John B. Scarlein

Associate Provost Frank E. Perkins, who will retire Friday afternoon after a group of students, administra-
tors, and faculty members of Dr. William D. McLaunin,
met, who was dismissed by Perkins in August, had been
director of the Office of Mi-
nority Education (OME).

Members of the Black Student Union, the Black Graduates Stu-
dents’ Association, and La Unionpressed the issue of Dr. William D. McLaunin.

Perkins refused to give any specific reasons for the dismissal. “It’s a very delicate thing to say things over a period of time,” he said. “We don’t want to get into a personal evaluation.” Perkins said they had asked him to state some good points about Dr. McLaunin, but the purpose of the meeting is not to give Dr. McLaunin positive or negative opinions.

Perkins said a search commit-
tee for a new director will be ap-
pointed, but any program in a start-up
exists for “up to 50” students, ac-
cording to Cheryl A. Butters,
Chancellor’s Office Director John M. Fresina.

According to the draft propos-
als for success, said Safety
Office Director John M. Fresina.

The right-to-know law requires employees to inform their em-
ployees about hazardous sub-
estans in the work area. Em-
ployees whose safety regulations are stringent enough can qualify for an exemption to the law. MIT’s safety policies have al-
ready met the requirements neces-
sary for an exemption, Fresina said. Each department at the Insti-
tute maintains its own safety com-
mittee, said Professor Freder-
ick D. Greene, chairman of the Committee on Toxic Chemicals.

The safety committees are re-
duelling as a staff sergeant-sta-
dard in the MIT Campus
Police in January 1979, after
joining the MIT Campus
Police. Winn is survived by his wife,
Judith, his son, Scott, his wife Alice, his
sisters, Mary Claffey, Joan New-
ark, Paula Lloynd, and Elizabeth
Gunn, who primarily worked as a
feminist in Atlanta. “He had been ill over the last couple of
years,” Olivieri said, “he was in good physical
condition, Olivieri continued.

Gunn was pronounced dead in a
hospital from a cardiac arrest, according to Campus Police
Chief James Olivia.

Professor Leon H. Trilling, Director of ISP.

Trilling said the goals of ISP
are important because they
provide students with an edu-
cational experience that
they can use in their
future.

Fresina: MIT’s labs are safe
