For more information call 965-9080.

In the Astronomics Division of Lear Siegler, you'll find flight technology of the highest order. Pilot Control Fence Baneras, Versatile Drone Autopilot. And other astronomics programs more advanced than any in the industry.

It's high.
It's here.
And it's yours.

Consider the options we offer to students and recent grads. For those in school, we have a work/study program whereby you can earn college credit for 3-6 months at LSU before returning to your degree. Or you can take advantage of our Summer Employment Program and spend part of your vacation in our advanced facilities and the rest of the time in the Southern Californian sun.

For recent grads, our National Education Program offers an overview of the Astronomics Operations. You'll spend 4 months in 3 integral operations: Hardware Engineering, Systems/Projects and Circuit Design — before choosing which area to specialize in. Or if you prefer, you may start working directly in one of the aforementioned areas.

So if you're into high-tech, we're into offering it. A current need exists for individuals with a degree in any of the following.

Electronic Engineering
Computer Engineering
Computer Science

L.SI Astronomics: The technology is here. Make it yours by responding with resume or letter of inquiry to: Marilyn Condon, Dept. CN, Lear Siegler Astronomics Division, 3406 Airport Avenue, Santa Monica, CA 90406. (213) 452-6746. Equal Opportunity Employer.
