students should look into funding

In the Editor:

Mits and faculty are concerned about the increase in graduate sponsorship research support from the military at MIT, and its potential effect on education. In this regard, the following is a letter sent to the Chairman of the Faculty, Jerome Arthur Smith, by Professor Vera Kistiaokovsky and 39 other faculty members. The letter requests that a Commission be established to investigate its relationship between MIT and the consideration of the impact of the funding on education. As students we share the concerns expressed in the letter. We request that a Commission be established to study the matter, which we request that this proposal be considered at the March faculty meeting.

As students we share the concerns expressed in the letter and encourage other students to do so as well. Furthermore, if a Commission is established to study the matter, we request that it include undergraduate and graduate student members.

This letter is written in the hope of educating the MIT community about the military sector. We urge students to become informed about the military and its impact on education and report back to the faculty. We request that this proposal be considered at the March faculty meeting.

Vera Kistiaokovsky
Professor of Physics
39 other faculty members

Microsoft will be on campus

Microsoft Corporation is seeking EXCEPTIONAL SYSTEMS DESIGN PROGRAMMERS to work on multitasking operating systems, networking, advanced compilers, interactive systems, graphics, productivity applications and more. You'll be working with hardware such as the Macintosh and other 10- and 32-bit microprocessors, and software tools such as UNIX (DEC-20, PDP 11, VAX, SUN 68000 machines) and software development tools you'll need in a small company with lots of interaction and sharing of ideas and methods where you can develop your full potential.

Microsoft is owned and operated by the same people of bold vision who produced the first microcomputer (BASIC), the first plug-in processor (SoftCard), the first lap-held computer (Tandy M100), and others... and the bosses -- Bill Gates and Paul Allen are technical wizards themselves. They understand the work, and they understand people like themselves who have the drive to be the best. Your work in Microsoft matters. It will be used by millions of people. There's a lot of satisfaction in that. Microsoft will give you a chance to show the world and yourself just how good you are.

To make a good thing better, Microsoft is located in the center of a scenic playground, just 15 minutes from the major sports and cultural activities of the city of Seattle. Life is casual, but active with a wide variety of outdoor activities, mountains for skiing and hiking, lakes, oceans, etc.

We will be interviewing students on campus Thursday, March 21, 1985. Please contact your career placement office for schedule information.
