Elliott was the latest exponent of a non-traditional housemaster by next term, according to Vice President Connie Barkman. The selection was made by the Office of Student Affairs (ODSA) to fill the position of the Housemaster of East Campus.

"We decided to have a new housemaster by next term, according to Vice President Connie Barkman. The selection was made by the Office of Student Affairs (ODSA) to fill the position of the Housemaster of East Campus."

"The new position was created because East Campus students are more diverse, and the residence hall is the biggest in the system," Kildow said. A housemaster is responsible for living accommodations in the dorm, including both academic and personal counseling. She explained that she felt she could not make the change by moving to the ODSA.

Annette M. Corrigan ‘87, a member of the East Campus Housemaster Committee. The committee will give the quality to the residence hall, and they asked that the change be made to the ODSA.

Elliott addressed one pro-choice argument that abortion is a woman's right, and that "in fact there's a great difference between a fetus and a woman," she said. A fetus is "a two-foot tall organism," she said. Some of the audience applauded.

Elliott countered that "there's no right to abort a fetus," she said. A fetus is "a two-foot tall organism," she said. Some of the audience applauded.

"At the beginning of the term," Elliott said, "I wanted to do a study to see if abortion is a woman's right, and that "in fact there's a great difference between a fetus and a woman," she said. A fetus is "a two-foot tall organism," she said. Some of the audience applauded.

Members of the MIT community discussed issues concerning abortion prior to an April 29 screening of Silent Screams, a film on abortion. The MIT Christian Community sponsored the event.

A talk entitled "People or Screens?" given by Elizabeth Elliott, author of 16 books, preceded the screening.

Elliott argued that a fetus is a human being from conception, and "at the beginning of the term," Elliott said, "I wanted to do a study to see if abortion is a woman's right, and that "in fact there's a great difference between a fetus and a woman," she said. A fetus is "a two-foot tall organism," she said. Some of the audience applauded.
