**Homemade Ice Cream, Both High- and Low-Tech**

"Ice cream is a universal food. Everyone eats it, and ice cream parlor names are as popular as the taste of the ice cream itself. Of course, in recent years, many people have decided to make their own ice cream. This is not only because it can be cheaper, but also because they can control the ingredients and the flavor. One method of freezing is an interesting one. The last option is an especially good one for anyone who likes this kind of humor."

**How to get your hands on a keyboard**

Welcome to MIT, the source of all which is electronic. You may find it confusing that you’re required to buy a computer, since in the past, it has been more of a choice among many students. The computer is not just a tool forMIT, but also a device that can be used to enhance the learning experience. It is not required to buy a computer, but it is recommended. If you don’t have one, MIT can offer one.---

**The Microcomputer Center in Building 11 offers periodic classes and workshops on microprocessors and IBM PC systems. Last year’s "graduation special" on the Apple II was so well attended by the depart- ments of students and staff that it was canceled.**

**Computers as Toys**

Personally, I think a computer is a game for the computers. You can justify it with an argument that the computer is an educational tool (see comments on Athens, above), and then you can cite the example of a student who used a computer to build a model of a molecule. But the computer is not just a tool for education; it is a tool for entertainment. Computers can be used for entertainment, and this is the main reason for the popularity of computers.---
