We can't guarantee your name will become a household word if you come to work for United Technologies. Science and technology have come a long way since 1827 and there are few things left to discover as fundamental as Ohm's Law.

Nevertheless, we have plenty to do and can always use another Ohm or two. You have the excellent training we need. Can you bring us some of the creative thinking and rigorous mental discipline of the original?

If so, we'll welcome you into an engineering community numbering 12,000 where you will find resistance to new ideas uncommonly low. You will work on aerospace systems or elevators, on lasers, robotics or heat pumps, or on any of the thousands of projects United Technologies companies have going worldwide.

And this we can guarantee: Like Ohm, you will have opportunities to break new ground.

Interested? Visit your campus placement office. Or write United Technologies, P.O. Box 1379, Hartford, CT 06124.
