*Denotes that the dormitory was at full capacity.

By Andrew L. Fish  

In the final round of housing assignments, Dean for Student Affairs assigned rooms to 68 graduate students who were still in limbo. Approximately half of these students received assignments in one of the five choices in the lottery, according to the deputy assistant dean of ODSA.

Boston Hall, which had been unoccupied in the past and has been "anti-sounding," was filled in two rounds of the housing lottery. Boston was the only dormitory to have spaces available after the second round. Additional roundhousing in McCormick opened up four spaces which were not available in previous rounds of housing.

The most crowded dormitory this year is 500 Memorial Drive.

A full list of these assignments is attached at the end of this story. The dormitories are in parentheses after the names of the students.

The increase in graduate numbers was due to students taking longer to receive degrees, not to increased admissions, Perkins explained. "The numbers of new undergraduates have increased nearly as fast as the total number of graduate students." Perkins asked the audience to think about the various means of support available to the students. Approximately one-third of the 3,000 students are on fellowships, one-third are employed in various forms of fellowships, and the rest are supported in a variety of mysterious ways," Perkins said.

Crowding decreases in dorms
