How to hack college.

Yes, it is possible to get through school these days without being a propeller head.

All you need is a computer that is not a propeller head, either: The Macintosh™

Take a program like Macintosh Pascal, for example. It lets you write programs with extraordinary ease. Because you can step through program instructions in one window and see it run graphically in a different window at the same time. You can de-bug faster. You can create remarkable graphics. And you have faster development turn-around time.

This is just one example of how Macintosh helps students work smarter, quicker and more creatively. And the beauty of Macintosh is, you don't have to know diddley about computers to use one.

There's only one thing you won't be able to do with Macintosh. Get confused, intimidated and frustrated.

As a full time faculty, staff or student at MIT, you are eligible to purchase a MACINTOSH COMPUTER through the Apple University program. For further information, visit the MIT Microcomputer Center Bldg. 11 - Room 209 or call 253-7686.
