Electrical/ Electronic/ Computer Engineering, Computer Science and Mathematics Majors

Simply put, no one is better equipped than NSA to give you a career on the frontier of communications. And there's good reason.

We're the National Security Agency and the work we do does a job for every American. We safeguard our nation's vital communications. We analyze and interpret transmissions. We secure the government's massive computer systems. It takes twenty-first century technology to grapple with these tasks. It takes people like you to "mind" the technology.

Electrical/ Electronic/ Computer Engineers sometimes specialize, often times to investigate a vast range of electronic information technologies. You could engage in small to large system design and prototype development, testing and evaluation, field installation, or operations support.

Computer Scientists exploit a huge computer facility in their work beyond the limits of finite state machine development and applications. Mathematicians get a full measure of technological support as well, in developing vitally important theoretical applications for mathematical concepts in areas such as cryptography. Here, your tools of the trade will be the tools of tomorrow. With them comes a rare degree of flexibility—a rare opportunity to explore new options along your career path. Rapid advancement, early responsibility, competitive salaries and enticing benefits—it all adds up to a career you can live with. And with our location between the vibrant urban centers of Baltimore, MD and Washington, DC, you'll be living well.

Bring yourself closer to tomorrow's technologies. Schedule an interview with your College Placement Office. Or write to the National Security Agency.

NSA will be on campus Nov. 5th interviewing graduating seniors.

NATIONAL SECURITY AGENCY
ATTN: MISS (A/HR)
Port Melbourne, MD 20716-0000
U.S. Citizenship required for applicant and immediate family members.
An equal opportunity employer.
