MIT: more than just a mindless meat grinder

(Continued from page 4) Faculty have to struggle so hard for the next grant that they hardly have time to do the research. And so, with our grades suffi-
ciently high, we charge each other to charge forth. The wild won-
derlust goes on, even and espe-
cially here, between physics prob-
lems and chemistry labs, before soldering circuits and after read-
ning Augustine. If you don't believe, then this doesn't matter. If you do, then it is a bit superfluous. But I can't sell, from my end. All I know is that I believe, although I don't know exactly what.

In the absence of extra hours in the day or extra terms — im-
possible for non-physics — students need a supportive envi-
ronment to encourage them to explore different intellectual di-
rections, and introduce them to different perspectives. Concourse and the Experimental Study Group do this very well.

But in the upperclass years, and in the large departments, there needs to be a lot more ef-
fort toward faculty-student con-
tact. As it is, living groups over-
whelm academia in the contest for a student's finite amount of caring and compliance.

I did find MIT a supportive en-
vIRONMENT for women, just be-
cause of the numbers: I don't be-
lieve there's another school in the

Campus, other than just a

Penn G, Steven D. Penn G, and jej. This is definitely true. But in the upperclass years, and in the large departments, there needs to be a lot more ef-
