Remember the Neediest!

POSITIONS AVAILABLE

SOFTWARE ENGINEER

TEK Microsystems is the manufacturer of DEC technology and has immediate openings for software engineers. We have a full and part-time position currently available in quality assurance/program testing and technical support, and development. Applicants must have C programming experience and good verbal skills. Good opportunities for growth.

ELECTRICAL ENGINEERS

Full-time and part-time positions immediately involving hardware design (both TTL and microprocessor based) documentation, testing, PCB design, through manufacturing. Assembly and/or C language programming helpful. Salary commensurate with experience. U.S. citizenship required.

An Economics' Curve:
by Arnold F. Oatley

Only a few weeks prior to the October 1929 stock crash, the New York Times reported: "At this rate, the United States will need more than 400,000 new factories to provide a new home for all the unemployed in the country when the depression is over." In one way, the U.S. economy is doing better than expected: The stock market has not collapsed in 1987. Instead, it has increased considerably, and the value of other assets, such as homes, has also increased.

However, this situation is not unique. The value of assets such as homes and stocks is frequently determined by factors other than the underlying value of the asset. For example, the value of a home is often determined by the demand for homes, which is influenced by factors such as the number of people in the community and the cost of living.

Moreover, the value of assets such as stocks is also influenced by factors other than the underlying value of the asset. For example, the value of a stock is often determined by the demand for the stock, which is influenced by factors such as the number of investors and the cost of investing with the stock.

The question is asked where in the collective national conscience do we conjure this hideous picture of the future? In the United States, we have a student interview policy, Dec. 4, that establishes the number of students that MIT will interview, Dec. 4, and the number of students that MIT will interview, Dec. 4, is the number of students that MIT will interview, Dec. 4, for the MIT community.
