Thompson brings campaign to MIT

By Niraj S. Desai

Democrat nominee Alvin E. Thompson brought his campaign for state representative to the MIT campus on Sunday, charging that incumbent Republican John C. Mitchell has lost touch with the district. Thompson spoke before the Society of Black Engineers, campaigned among Amherst Alley, and concluded an interview with The Tech.

Graham, who is also a Democrat, was edged out by Thompson in the Sept. 15 Democratic primary. Graham, on the other hand, found it difficult to stay in touch with constituents, Thompson charged. He noted that Graham was excused from his duties in his own community and added, "It's not an easy job to stay in touch with constituents." Thompson added that the campaign for MIT would be different because they would be permitted to present evidence on the negative impacts of the development on the availability of low-income and erate-income housing in the neighborhood.

The rent-controlled apartments are in five dilapidated houses on the proposed site of a 380-room hotel and conference center. Four of the units are currently occupied.

Last Tuesday, Judge Joseph Mitchell remanded the case to the Rent Board, ordering a new hearing where operators of Universities Park would be permitted to present evidence on the negative impacts of the development on the availability of low-income and erate-income housing in the neighborhood.

Thompson, director of resource development to raise $375 million for MIT and endowments, according to 

Kessler discusses impact of AIDS

By Niraj S. Desai

"AIDS isn't treated like other diseases," noted Larry Kessler, executive director of the AIDS Action Committee, expressing concern about how the country will handle the disease in the next decade. Kessler was the guest lecturer yesterday for the course for the student body, "The Problems of AIDS," Massachusetts General Hospital and other groups, Ra
ter put on line and then corrected the system with zero problems. The greatest complaint yesterday, Berlan said, was that by tomorrow the system would not be fully debugged and the software used to bring up the system was very new. "When we looked into the technology in 1985, we were under the impression that it would be fully test-

Berlan explained, "bringing up the system with zero problems was more difficult than expected."

The problems were compounded by the fact that the software used to bring up the system had not been fully debugged and the system used to bring up the system was new. "When we looked into the technology in 1985, we were under the impression that it would be fully test-

Berlan also said that MIT's Petition for the Future is seeking help from individuals who are in
terested in the issues.
