Talking Heads

Inagada DaVida '93

Whistle: What do you think?

Inagada: Sorry, I thought you had read the previous interview. Do you think it would be a good thing to turn MIT into one giant shelter for the homeless?

Inagada: You know, it's about time people started thinking about others. Just the other day, I was telling my roommate that MIT students need to be a bit more caring about their fellow human beings, and that it was high time we did something for the homeless here at the Institute. If you look at all the pain and suffering in the world—Whistle: So if I may interrupt, you think that...

Inagada: Wait, I'm not finished! If you look at how many people suffer in this world, it makes you feel really truly bad. I mean not just bad, but bad. You know what I mean?

Whistle: All too well.

Max Morris G

Whistle: Should the US government turn MIT into a homeless shelter?

Max: Hah! That's a good one. Let the scumbags that's what I say.

Whistle: How can you be so heartless? Don't those people deserve a place to live?

Max: I suppose you think they deserve the same rights as me, don't you? That's pretty sick. I should work my butt off at this school, get into the grad program, and then use some of my hard-earned money on other people? Get real! Those are the '90s! And besides, I'm in charge of The Awful, what kind of an answer did you expect?

Artists

Harries, being as accommodating as a fool of the Fascist corporate Institute could be, told the Pagan Students Group that if they wanted a sculpture, they should think of something themselves. They proposed the use of earwax to form a giant pair of earmuffs. We at the Whistle were taken aback at first, but then thought about it. Earwax is malleable when warm, but becomes stiff when cold—the perfect modelling clay. Everyone has some, and as Irsas R. Uss, nurse in the MIT Medical Department joyfully exclaimed, "Dean Tewhey gets his ears cleaned every few days. He says it alleviates tension, so there are added psychological benefits, too!"

Earmuffs, we realized, must have been harnessed to symbolize human vulnerability to the natural elements as well as the remarkable flair the average MIT student has for fashion. A wise choice, indeed.

The Whistle urges you to go and give yourself when donations are asked for. Donations will be tax deductible, and can be given in honor of a relative, friend, teacher or Dean James R. Tewhey.
