"I've been lucky because I've been able to pursue so many different things here. It's given me a very rich career."

The Engineer: Drew Philbrick
Digital Signal Processing
BS, Electrical Engineering
Northeastern University

Date Joined: May 1971

Last Position: "I came to Bose right out of school. I interviewed at two or three companies and couldn't stay there. But I wanted opportunities I've had here. They would never have been able to support my needs for new things. It's what it really is about -- opportunities."

The Goal: "I really had no intention of staying to work right away. Back then I was a musician. I was going to study that for awhile. Then someone told me about Bose. Since I really into sound, I thought 'why not at least give it a try?' I've always tried something new for what interests me. In the interview, I realized this was a chance to do that in my work life."

The Result: "I've been so much here -- circuit design, research, computer engineering, product development. I've enjoyed them all. It's great to be able to look at a new area, something you don't really know anything about, and learn more about it, more into it. When you're an engineer, you're multidisciplinary. That keeps it very interesting. You're always learning something new, contributing something new. You're challenged, and so everyone else around you."

For more information on current opportunities at Bose, please call Rhonda Long, Engineering Group, (508) 879-7330 Ext. 6650.

Sundays, 9 and 11 a.m.

Ring, Ring... Hello, Nightline. Hi, What is indamine? Just a minute... It's any of a series of organic bases whose salts make unstable blue or green dyes. Thanks... Good night.

Ring, Ring... Hello, Nightline. Can I speak with a female staffer? Sure... Hello, Nightline. I think I'm pregnant...
