### MIT Proposes Parking Changes

**City Proposes Parking Changes**

By Eva M. May

Despite a decrease in the number of positions offered, the three undergraduate engineering internship programs are still offering a medium for developing our Jewishness as well as the benefits of Greek life," Mezrich said.

AEPhi's national philanthropy is the support of a rehabilitation center in Israel. The residents have discussed the possibility of involving speakers to discuss Jewish issues, and hope that the formation of the group will facilitate women coming together on Jewish holidays. However, Judaism will not be the group's main focus, according to the women. The group hopes to partake in all of the Greek activities, and will work to provide support for all of the women in the sorority, they added.

One of the main concerns of current sororities is that a fifth could make PanHelen better by providing support for more women at MIT, "AEPhi can "use all the knowledge you've gotten here." Students also felt that Cambridge parking is crowded, and they are fighting to allow a limited number of additional spaces, which are pieces of DNA unrelated to Huntington's disease in areas of the brain that are pieces of DNA unrelated to Huntington's disease. However, people will have Huntington's disease and will work to improve this test.

The results of the discovery appeared in the March 26 issue of the journal Cell. Huntington's disease is a disease characterized by involuntary jerky movements, mood swings, slurred speech, Depression, and eventual dementia. The age of onset of the disease is variable, but people with the gene usually begin showing symptoms between the ages of 30 to 50. Death usually follows within 15 years.

The gene was found on chromosome 4, and Dr. David E. Housman of the Huntington's Disease Center at UCSF was able to work with a team of research that included 8.5 MIT biologists, announced on March 23. They had identified the gene responsible for Huntington's disease. Of the 120 spots. Parking in the remaining spots would be limited to under two hours, modified, or limited to Cambridge residents.

ging the parking spaces. The meeting was attended by about 25 mem-
bers of the Cambridge community, mostly students with cars who are upset by the changes. They were even more disturbed by the pro-
posed changes.

The proposed changes, as well as - the reasons for the changes were presented by Loren Presto from the Cambridge Traffic and Parking Office, which is in charge of realiz-
