Systems Wizards We Want You

D. E. Shaw & Co is a fast-growing, highly capitalized global investment bank, known as a leader in quantitative finance and computational trading. Created five years ago by David Shaw, an ex-Computer Science professor from Columbia University, the company started as a team of hackers with a mandate to apply cutting-edge techniques to securities trading.

We are seeking Systems Programmers and Administrators at all levels to join our select team of software engineers (which includes two recipients of the USENIX Association Lifetime Achievement Award) in building state-of-the-art computer systems to trade billions of dollars worth of securities.

If you have a strong knowledge of SunOS, C, UNIX, distributed and networked environments, and extensive experience in systems programming and administration, we may have a position for you. Responsibilities might include building distributed real-time applications; designing, supporting, and enhancing our networked computer environment; and creating custom links with our customers' systems.

We are prepared to compensate top candidates at levels above the market.

Please send your résumé to:
