IAP Seminar Gives Advice: How to Get a UROP

By Daniel C. Stevenson

"In MIT, I'll have to work with another — professors were once just like you," said Claude J. Poux, an administrator for the Undergraduate Research Opportunities Program, advising the seminar's interested graduate students on getting involved in research. Poux spoke yesterday afternoon in 121-170 to address a seminar on the history of science. Poux said, "I'm here to help her plan the conference, to suggest meetings that her plans need to be made in order to make sure she has the conference she wants." Poux gave the seminar a preview of a potential UROP experience, noting that the seminar would take place on Tuesday, March 21, from 12:30 to 2:00 PM in 121-170. The seminar will be followed by a reception in the MIT Science Center. For more information, please contact Poux at 253-3066 or send email to poux@mit.edu.

Basic Guidelines for Finding a UROP

1. Have a resume ready.
2. Obtain copies of recent publications in the field.
3. Do not call faculty members to inquire about UROPs. And if they request that you set up an appointment, do so.
4. Talk to administrators and ask them to suggest faculty that you might approach.
5. Be ready to talk about your interests.
6. If you want to propose your own project, make sure that the faculty member is interested in supervising your work.
7. Read the UROP bulletin board in the Infinite Corridor.
8. Visit the UROP Office at 253-140 for assistance.
9. Once you have found a UROP, come to the UROP office to secure the proper forms to complete your application.

On-Campus Resnet to Be Activated Next Tuesday

By Arif Husain

Kilson

The ongoing project, started last summer, has already connected all of the off-campus individuals to the Internet. Twenty students who requested the service have been able to access the global network. The project has received a great amount of attention, and is expected to be completed by the end of the semester.

Using Resnet, students who own Macin- tosh computers with appropriate networking hardware will have access to newsgroups, mail, and general information about the world. Aside from the basic services it provides, Resnet has the ability to access the global Internet. Students can access the global Internet by using the dial-up service, which will allow them to access the Resnet archives anywhere on the global Internet.

How to access Resnet

1. Students interested in accessing Resnet must meet with one of the Residential Com- puting Consultants assigned to their dormitory, Barlow said. Nine residents, 18.5 percent of the entire student body, have been active in the UROP program.
2. The Resnet office will provide access for students to the Resnet archives on a regular basis. Students interested in accessing Resnet must meet with one of the Residential Com- puting Consultants assigned to their dormitory, Barlow said. Conference Focuses On Black Women

Women, from Page I

The conference will take place.

Original idea for the conference

Kilson came up with the idea for the conference "through [her] personal frustration through the scope of isolation as a black woman." There were few faculty members, especially here at MIT, that she felt comfortable with. For example, when she went to academic conferences, she felt isolated because few black women were present with her. As a conference, black women can have the "experience of being in the minority of the minority for a change." "I started researching the history of science, the other organizations that are interested in the history of science," she said. "I contacted the MIT, Wellesley College, and several others.

If there were a prototype to this conference, it would be a small conference about 20 years ago in Radcliffe College, Kilson said. One hundred people attended the event. "It was a great opportunity of planning and the high costs, the conference was not an annual event," Kilson said. Planning this conference has "taken up 14 months of my life," she said.

Kilson hopes another school will pick up the project three years from now. A likely choice would be Spelman College in Atlanta, she said. Spelman College for black women.

Although it is still possible to register for the conference, students should be aware that registration has been closed due to capacity limits. Interested students could contact the seminar organizers to see if their names are on the list of potential participants.
