Glavin Responds To SafeWalk Concerns

The Tech received a copy of this letter addressed to Jill Gliger G.
I feel I must add further address some of your concerns. I am sure you think that students should think about this issue in the geographical areas that SafeWalk would cover.
What did we say? We said that the boundaries should be the main campus (bordered by Memorial Drive, Vassar Street, Aubrey Street, and Wadsworth Street). We set these boundaries because this is consistent with the expectations already established. Furthermore, we have praised the MIT community, and it is unusual to walk the campus perimeter and city streets after dark, particularly late at night. SafeWalk operates during peak hours of risk: 10 p.m. to 3 a.m. The later the hour, the more isolated the streets, and the risk of criminal violence increases.

We appreciate your input. We heard the suggestions that you have been heard. We have just experienced the worst winter in history, certainly in terms of snowfall. During the entire winter the Institute remained open and operating as usual. This placed a tremendous burden on our service workers to keep pathways, walkways, and stairs clear. We have experienced the most unusually cold and snowy winter since our arrival in Boston, and everyone wanted faster service. It is not perfect, but much of a city's property. Lighting around Edgerton was upgraded a student group worked with us on that project, and we hope the Key-Card system is to protect residents from outsiders. Since the ILGs give these non-resident hardware service meeting all the desired needs would be very expensive. A formal safety service has only been in existence for two years. To an extent, we have had to make trade-offs between service and safety. We continue to have the problem we think about this issue, especially since you raised the question of the safety and security of those people who are not students.
