Everyone Placed After 2nd Lottery

By Sarah Y. Kelightey

After the second round of the housing lottery, all students have been assigned housing, and a third round will not have to be held as it last year, according to Andrew M. Eisenmann '95, assistant dean for residence and campus activities.

Following the first round, about 160 students were placed, and another 44 were pushed to the next lottery of 44 were pushed to the next lottery. Of these 44, 11 accepted bids from independent living groups.

The 33 remaining students were assigned to dormitories, Eisenmann said. Not all students received their top choice, but the distribution was similar to the first round of the lottery, he said.

More spaces were created when about 20 freshmen who had

received assignments decided to accept bids from independent living groups, six upperclassmen were through rush and pledged fratricides, and other upperclassmen decided
to move off-campus, Eisenmann said.

Fewer overcrowded this year, the level of crowding was at 195 people beyond capacity, Eisenmann said. Eisenmann did say that RCA has received some complaints from students unhappy with their assignments, and there may be more com-

The new system relies on the concept that reflected sound is more realistic than direct sound, according to Jablonski. The new system was also installed.

"Basically anything in 26-100 were upgraded to Bose 502A speakers, the old speakers in 26-100 were replaced with Bose Acoustic Wave Cannons, which are speakers designed to put out low frequencies than possible with the previous sound system.

"The major change will be that the sound will be much more balanced over the entire room," said Scott D. Centurioni G, former chairman of LSC. "Pretty much any where in the room, you will hear the sound in stereo. This will help a lot of the "fringe" seat as well as make the middle seats a lot better." The new speakers in 26-100 were upgraded to Bose 502A speakers, and Bose Acoustic Wave Cannons replaced the old subwoofers, which were speakers designed to put out low frequencies. A new sound processor that supports Spectral Recording and stereo surround sound was also installed.

By upgrading to the new sound system, LSC hopes to keep up with theater standards. "Stereo Recording is currently one of the best analog standards available. The new system will also allow for a future upgrade to digital sound, which Jablonski hopes will happen within the next decade.

"Once a digital standard has emerged, we will be able to plug right into it," Centurioni said.

"[The old system] used to be state of the art, but movie technology has come a long way. We wanted to put in the best analog system," Jablonski said.

The Weather
Today: Mostly sunny, N/F (1°C)
Tonight: Chilly, clear, N/F (10°C)
Tomorrow: Mostly sunny, N/F (11°C)
