

SPIRITISM IS SUBJECT OF ADDRESS TO CATHOLIC CLUB

"Spiritism—and Sir Oliver Lodge" will be the subject of an address by Father Corrigan, S. J. before the Technology Catholic Club at the next dinner-meeting, to be held in the North Hall at Walker Memorial on Tuesday, February 24, at 6.15 o'clock. Dean Burton will speak and there will be a number of Alumni present.

Father Corrigan is widely known as an expert on "spiritism" and is the author of several treatises on the subject. Since Sir Oliver Lodge's advent in America he has devoted much time to discussion of the English psychologist's arguments. At the meeting a new constitution will be presented for consideration by the members and plans for the formal dance to be held in Hotel Somerset during April will be announced.

BOSTON RIFLE CLUB SENDS CHALLENGE TO RIFLE TEAM

The Boston Rifle and Revolver Club has challenged the Technology Rifle Team to a shooting match, which will be held today at the Walker Memorial range. This club is one of the best in this section of the country, having defeated practically every team that it has met. All of its scores in its previous matches were 198 or better. The Institute club will need to do exceptional work against this team, and a victory will mean much for its prestige.

Varsity Septet Defeats Williams in Slow Game

Technology's hockey team took a fall out of the Williams College team Saturday afternoon at Williamstown, 3-1. The game was played on soft ice and was very slow. Williams took the lead in the first half but the Institute men got going toward the end of the game and goals by DuVernet, Capt. MacNeil and Williams decided the contest in their favor. The teams played seven men on a side. Schwamb's work in goal for Technology was a feature of the game.

Copley Ballroom Will Be Scene of Junior Prom

The coming Junior Prom will be held in the ballroom of the Copley Plaza Hotel, on the evening of April 16. The committee in charge, consisting of M. J. M. Zoller '21, E. W. Booth '21, A. D. Harvey '21, K. R. Sutherland '21, L. W. Conant '21, was elected last week. Bawden, as president of the class, is ex-officio chairman of the committee.

Natators Oppose Brown

The varsity swimming team will meet Brown tomorrow night at Providence in a contest that was postponed from January 17. The Technology lineup will remain substantially the same as that which represented the Institute in the Yale meet. Weber will probably be entered in the fur

long, Biddell in the century and the 50-yard dash, and Purinton and Ferdinand in the fancy dive.

This will be the first battle of the season for the Bruin mermen and little is known of the makeup of their team. No trouble is anticipated by Coach Alex Sutherland for his charges, as from past performances they should win the meet with comparative ease.

Invite Eastman and General Wood to Address Students

At the last meeting of the Institute Committee, a committee was appointed to invite Mr. George Eastman to a smoker at the Institute. The committee feels that in this way, Mr. Eastman will have an opportunity to meet the student body and the students will be able to become better acquainted with Technology's benefactor.

In addition, arrangements are being made to have Major General Leonard Wood address a mass meeting of the students when he comes to Boston on his tour of the country as a candidate for the presidency.

T. C. A. Heads Make Report for the Scholastic Year

At a meeting of the T. C. A. Cabinet in the Grill Room at 6.00 o'clock yesterday the heads of the various departments read their reports of the work accomplished since the beginning of the Institute year. The Cabinet is composed of the heads of the various service departments and P. R.

Ziegler '00, H. S. Ford, and Dean Burton of the Advisory Board. After the reports were read, an informal discussion was held at which each department head presented the problems relative to his work, and plans for future activities.

C. E.'s. Inspect Navy Yard

Despite the snowy weather which threatened to become a blizzard, about twenty-five enthusiastic members of the Civil Engineering society journeyed to the Boston Navy Yard last Friday.

The trip included a visit to the machine shops, drydock, foundry, and to the new whaleback oil tanker which is now being built at the yards. The rope walk was also inspected. This is the building, a quarter-mile long, where the great lengths of rope are made. The power plant was the last to be seen.

R. W. Pratt '98 Dies

R. W. Pratt '98 died at his home in Cleveland last Saturday. After his part in the construction of the Havana, Cuba, sewerage system. Lately he has been connected with the engineering department of the State Board of Health and has done work as a consulting engineer. He is survived by a wife and four children.

An Idea, Our Good Name—and the G. T. M.

The problem of keeping abreast of the rapid advances that characterize both shop practice and factory equipment in these days of high pressure business and quality-quantity production is something that over-reaches the limits of one man's or one plant's experience. Consequently, the progressive factory manager, the engineer, and the superintendent make constant study of the latest in ideas and facilities their chief concern.

The idea underlying the plan of the G. T. M.—Goodyear Technical Man—is to provide the right type of belt for every specific industrial use. It removes the important elements of power transmission and material conveying from the field of hit-and-miss operation, and puts them on a scientific basis.

The force of this idea appealed to the Fort Atkinson Canning Company when they were thinking about the belt equipment for the new plant at Jefferson, Wis. They had never used a Goodyear Belt—the belts they had in their parent plant were giving generally satisfactory service—but they knew Goodyear's reputation for quality, they knew the countrywide approval won by Goodyear Belts operating in other canneries, and they were impressed by the G. T. M.'s analysis of their requirements.

So they specified 100% Goodyear equipment—transmission belts, conveyor belts, steam hose and water hose. Types, widths and plies conform to the G. T. M.'s recommendations—Goodyear Gides for the light drives, whose small pulleys run at high speed; Goodyear Klingite for general transmission duty; and Goodyear Klingite on the "mule," where severe belt punishment aptly names the drive. Where raw materials in transit deposit their belt-eating acids, Goodyear Conveyors offer qualities especially resistant to acid.

The unfailing performance of these Goodyear Belts substantiates the plant analysis method of applying belts to the specific service. Their freedom from belt troubles—no slipping, no stretching—to an appreciable amount, which usually causes an interruption in production in order to "cut out" and take up the slack—is their own best service assurance.

A special study of belt function in various industries is set forth in the Goodyear Mechanical Goods Encyclopedia. Students and teachers of engineering will be furnished a copy on request by letter to the Mechanical Goods Department of the Goodyear Tire & Rubber Co., Akron, O.
