

ENROLMENT LARGE

Up to date, registration for the summer courses at the Institute has reached a total of over 800 students. The number who will attend the summer camp for surveying has mounted to 128 undergraduates from the courses in Civil and Sanitary Engineering, and also Engineering Administration. The summer camp for mining will have present 26 students. As the registration continues until June 28 for those courses which are not underway until late in the summer, the total of those attending all courses will probably reach 1500.

The increase made over the enrollments of previous years is considerable. In 1919 the number attending the summer school was 891, in 1918, 507, while of these totals the per cent present from other colleges in 1919 was nearly 40 percent., and in 1918, not quite 29 percent.

A considerable portion consists of sophomores and freshmen in chemistry courses taking, respectively, quantitative and qualitative analysis.

MONSTER TECHNOLOGY REUNION NEXT WEEK

(Continued from page 1)

Waite '90, who will speak about the soldiers of Technology.

Tuesday morning will be given over to the discussion of "Technology, Present and Future". Dr. Walker, Director of the Division of Industrial Cooperation and Research, will speak

on the "Technology Plan". Mr. Merton L. Emerson '04 will explain the proposed plan for the Alumni organization and next will come short talks by members of the undergraduate activities.

Dance Also On Program.

The frivolous part of the program includes the dance to be given Monday night on the floating pavilion, Jack o' Lantern.

An all-day trip to Plymouth has been planned for Wednesday. Two boats have been chartered for the occasion, and in the opinion of those in charge the day bids fair to be one of the jolliest of the entire reunion, as all kinds of surprises are in store to be sprung during the trip down the harbor.

Wives to be entertained at Luncheon

Tuesday evening will see a large gathering of the Alumni in Walker's main hall at 7 o'clock when the big banquet is to take place. It is expected that about 1200 will be present with about 500 guests to hear Sir Auckland Geddes, formerly British Minister of the Admiralty and at present British Ambassador to the United States. It is hoped Governor Coolidge will also be included among the list of speakers.

The wives of the visiting Alumni will be entertained at a complimentary luncheon to be given at the Chilton Club, Commonwealth avenue, on Tuesday at 1 o'clock by Mrs. Edward Cunningham and Mrs. James W. Rollins, wife of the Chairman of the Reunion Committee. After the luncheon, there will be an auto trip

through the suburbs, after which the ladies will meet at the Brookline Country Club for afternoon tea and will be received by Mr. and Mrs. Coleman DuPont, the former being retiring President of the Alumni Association.

About 14,000 preliminary puostals have been sent out to the Alumni, 1500 of which have been answered, 850 deciding to come. The Class of '98 is sending 28 men, the largest number sent by any of the older classes. The class that will have the largest representation is the Class of '17, with 58 delegates. One man from the Class of '68, the first class to be graduated from the Institute, will be present at the Reunion.

SENIORS MAKE MERRY ON ANNUAL CLASS DAY

(Continued from page 1)

mon B. Deal; Biology, Alfred deZubiria; Chemical Engineering Leland W. Gillatt; Sanitary engineering, Norman Dawson; Naval Architecture, Alfred W. Peterson; Electro-chemistry, John R. Fuller; Engineering Administration, Warren L. Cofren.

On behalf of the class H. O. Davidson presented to the Institute and to the student body a large picture of the late President MacLaurin. Reginald H. Smithwick, president of the class of 1921 and chairman of the Institute Committee, accepted the gift for the school.

After the presentation Akers read a note from Mrs. MacLaurin express-

ing her regret that she could not attend any of the exercises of Commencement week and bidding the class of 1920 an affectionate good-by.

Frederick W. Boley, class statistician, announced the results of balloting among the members of the class on several important and vital subjects. As to what professor would make the best president of the United States, the class was in favor of Edward Professor Miller, head of the department of Mechanical Engineering, who would run on a platform of "five-cent cigars and an arrangement to save the nation from destruction by turning off the valves."

The fact that Professor Driske "looked like Abraham Lincoln" failed to win him the nomination and Professor Croissant was defeated despite his alleged "ability to throw the bull better than Wilson."

Robert D. Patterson and Merrill B. Knox gave a clever cartooning skit in which Patterson furnished the crayon work and Knox the verbal explanation of the student's four years of grinding through Technology.

As a grand finale, impersonations of five professors were presented. Professors Gracey, Goodrich, Passano, Miller and Derr were presented as the student sees them. Affectionate diminutives were conferred gratis on them and their favorite expressions were thrown back at them in a whirl of satire.

At the close of the exercises the graduates sang the class parody on "They go wild, simply wild," the words for which were written by J. H. Coyle.

MURAD

THE TURKISH CIGARETTE

There is always
a reason why!

MURADS are made of 100% pure Turkish tobacco—the world's most famous tobacco for cigarettes—grown about the Black Sea, in the Orient.

MURADS are also the world's largest selling high-grade Turkish cigarette—and their greatest increase in sales in any year was in 1919.

Now don't you agree, there is always a reason?

It is true that "ordinary" cigarettes cost a trifle less.

Judge for yourself—!
